Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE

WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

ICPSR PROCESSING NOTES FOR #35309

Washington Representatives Study (Organized Interests in Washington Politics) - 1981, 1991, 2001, 2006, 2011

1. **Asterisk within Responses:** The string variables **LOCATION**, **ORGNAME** and **ORGNAME11** contained several occurrences of asterisks within responses. No information was provided.
2. **Undocumented Codes:** The variables **FOREIGNPOLICY**, **CATEGORY**, **CATEGORY1**, **CATEGORY2** contain undocumented values and are labeled "UNDOCUMENTED CODE". No information was provided.
3. **Sequential Record Identifier:** ICPSR created a unique sequential record identifier variable named **CASEID** for use with online analysis.
4. **Weight Variables:** Several cases within the dataset feature a value of zero for the variables **IN11WEIGHT**, **IN06WEIGHT**, **IN01WEIGHT**, **IN91WEIGHT**, **IN81WEIGHT** resulting in the following SPSS error message when weights are applied:
 - i. On at least one case, the value of the weight variable was zero, negative, or missing. Such cases are invisible to statistical procedures and graphs which need positively weighted cases, but remain on the file and are processed by non-statistical facilities such as LIST and SAVE.

Washington Representatives Study Data Documentation

1. Project Summary

The Washington Representatives database includes information about thousands of organizations involved in Washington politics, their organizational characteristics including the kinds of interests they represent and the nature of their membership, if any, and the activities they undertake in the pursuit of policy influence. The database encompasses all organizations listed in the *Washington Representatives* directories (published by Columbia Books) for 1981, 1991, 2001, 2006, and 2011 as being active in national politics by virtue of either having an office in the D.C. area or hiring D.C.-area consultants or counsel to represent them. These organizations have been classified into 96 categories based, principally, on the kinds of interests represented.

This memo documents how the data were collected and coded and provides information about each variable in the data set.

2. Data Collection Instruments

2.1. Listing Organizations

The Washington Representatives database, which is structured so that the unit of analysis is the individual organization, includes all the organizations listed as “Clients” in the *Washington Representatives* directories for 1981, 1991, 2001, 2006, and 2011. In addition to using the directories for a listing of the names of organizations that seek political influence in Washington, we drew on the directories for information about the number of in-house lobbyists they have on staff and the number of outside counsel and consultants they hire. We used a number of other resources -- in particular, organizations’ own Web sites -- to code additional information such as the date each organization was founded and the location of its headquarters.

The *Washington Representatives* directory, which is now published twice a year by Columbia Books, is the most nearly comprehensive listing of politically active organizations in Washington at any particular time. The information is now also contained on the Web at www.lobbyists.info. Twice a year the contents of the lobbyists.info Web site are published in hard copy as the *Washington Representatives* directory. The 1991 General Accounting Office Report that was used as justification for the 1995 Lobbying Disclosure Act made the point that, of the 13,500 people named as lobbyists in the *Washington Representatives* directory, fewer than 4,000 were registered with Congress.¹ That the GAO relied on the directory for its evidence about lobbyists suggests its significance as a source of information.

¹ Jonathan D. Salant, "Senate Passes Tighter Rules on Registration, Disclosure," *Congressional Quarterly Weekly Report*, July 29, 1995, p. 2239.

The directory seeks to include all organizations that are active in Washington politics by virtue either of having an office in the DC area or hiring DC-area consultants or counsel to represent them. The directory also lists foreign agents registered with the Department of Justice under the Foreign Agents Registration Act. For the purposing of studying organizations that seek political influence, the *Washington Representatives* directory has two advantages. In contrast to various compendia of membership associations -- the most notable of which is *The Encyclopedia of Associations* -- the ***Washington Representatives* directory includes politically involved organizations such as corporations and hospitals that are not membership associations.** Furthermore, **it includes only organizations that are active in national politics and excludes membership associations that do not take part in politics.** However, the *Washington Representatives* directory is not an exhaustive listing of such organizations. It does not list organizations that participate by, for example, engaging in grassroots lobbying or testifying in Congress without maintaining an office in the Washington area or hiring Washington-based counsel or consultants.

As indicated below, when we had a source specifying a universe of organizations that undertook a particular activity -- as we did for testifying in Congress, filing amicus briefs, and making PAC donations -- we coded all organizations that were active in that way during a specified period, even those that did not have a Washington office or hire DC-area counsel or consultants and that were, therefore, not listed in the *Washington Representatives* directories.

According to an interview on November 10, 2003, with Valerie Sheridan, then editor of the *Washington Representatives* directory at Columbia Books, Columbia Books contacts each currently-listed organization annually asking for an update. While Sheridan, who has now been replaced by Duncan Bell, relied on congressional lobby registrations filed with the Clerk of the House and Secretary of the Senate as the first line of defense in listing organizations, she also used information from other sources such as *CQ* or *National Journal* to include organizations not registered with the House or Senate. For early editions of the directory, Sheridan contacted several major executive branch agencies (e.g., the Federal Trade Commission and Federal Maritime Commissions) and checked their dockets but ceased this practice because she found that the effort did not yield sufficient additional listings. Sheridan indicated that organizations generally want to be listed in the directory and would often get in touch with Columbia Books to let them know about changes in information.

Several factors made it difficult to realize our objective of creating a single unique record for each individual organization. For one thing, organizations are not always listed with the same version of their names. (Different directories list "DuPont" or "E.I. Dupont de Nemours & Company." One directory has entries for both.) Besides, organizations often change names. To the extent that we were able to trace a single organization as its name changed, we have recorded an organization's known alternative names. Even when an organization retains the same name, it may merge with another organization or divide, spinning off an additional organization. Moreover, it is often difficult to know how to code entries in a directory for constituent parts of listed organizations -- state affiliates, corporate divisions or subsidiaries, and the like. The protocol specified creating an additional entry in the database when the *Washington Representatives* directory separate listing for a parent organization and an affiliated part, but

there are, undoubtedly inconsistencies. All of these difficulties arose especially frequently when coding corporations listed in different directories.

2.2 Categorizing Organizations

An important part of our investigation was to place these political organizations into categories based on the nature of their functions, the interests represented, and, in many cases, their organizational structure. In contrast to most studies of organized interests that rely on highly aggregated categories, we deliberately proliferated the number of categories in order to capture fine distinctions. Thus, the interests of business are represented by several categories of organizations: corporations, both domestic and foreign; trade and other business associations, again both domestic and foreign, which have corporations as members; occupational associations of business executives and professionals, such as human resources specialists, employed in corporate settings; business-related research organizations. Scholars interested in particular kinds of organizations -- for example, Latino groups, blue-collar public sector unions, veterans groups, organizations advocating for school choice -- can use the database to create lists of such organizations. Detailed descriptions of the categories can be found later in this report in the section on "Coding" and in Appendix A.

In order to place organizations into one of 96 categories, we often dug deeply -- considering mission statements, FAQs, organizational histories, and the composition of the board or the staff. Although organizations' Web sites were usually the best sources of information (especially in coding later directories), we also consulted outside sources and even made phone calls to organizations to get our questions answered. As a result, we were able to find information about all but 1.4 percent of the nearly 12,000 organizations in the 2001 directory and all but .7 percent of the more than 14,000 organizations in the 2011 directory. Still, the construction of this database required many judgment calls. Moreover, in spite of repeated efforts to clean the database, the volume of data coded implies that, inevitably, mistakes were made.

The categories in this classification scheme accommodate many distinctions. However, as might be expected, the boundaries between categories are sometimes imprecise. For example, it is not always possible to differentiate two kinds of business-related membership associations: trade associations, which bring together companies in the same industry on an ongoing basis to cooperate on multiple issues that confront the industry, and other business associations, a category that includes peak business associations like the National Association of Manufacturers as well as ad hoc coalitions and single-issue groups joining together firms from several industries.

In spite of the large number of categories, there were, inevitably organizations that seemed to fit comfortably into more than one category. To accommodate such cases -- for example, the National Medical Association, Mothers against Drunk Driving, or the American Indian Higher Education Consortium -- we permit an organization to be coded into as many as three categories. Thus, the NMA, a membership group of African-American physicians, was coded as both a professional association and an African-American organization. Organizations that were coded into two or three categories appear a corresponding number of times in the data. Thus, if an

organization was coded as belonging to two categories, it appears twice in this data set, once for each category to which it was assigned. **In order to correct for such multiple counting, it is necessary to apply weights as specified below.**

We also recorded information about each organization's membership structure. A majority of the 96 categories, accounting for the vast majority of organizations, contain organizations of a single organizational membership type: for example, "institutions" such as corporations, universities, or hospitals that have no members in the ordinary sense; membership associations of individuals; membership associations of institutions; or governments. Such important categories as unions, professional associations, corporations, or trade associations are defined by the character of the membership, if any. When a category mixed membership associations, institutions, and associations of institutions and did not dictate a particular organizational membership status -- for example, the various kinds of public goods-seeking organizations called "public interest" organizations -- we coded the organizational membership status of individual organizations one by one. Information about the coding of **organizational membership status** can be found in Appendix B.

2.3 Lobbying Spending

For all organizations in the 2001 directory, we recorded the total amount spent on lobbying in 2000 and 2001 as reported in the lobbying registrations filed under the Lobbying Disclosure Act (LDA) of 1995. For all organizations in the 2011 directory, we recorded the amount spent on lobbying in 2010 and 2011 as reported in the lobbying registrations. The LDA, which covers communications, both oral and written, about legislative or administrative issues, extended coverage to foreign agents and expanded the list of targets to encompass not just members of Congress but also their staff members as well as high-level policy makers in the White House and executive branches agencies. As passed in 1995, the LDA required those who spend more than 20 percent of their time in a six-month period on lobbying and who receive more than \$5000 and organizations that spend more than \$20,000 in a six month period to register -- sums that are adjusted periodically to account for inflation. In 2007, Congress passed the Honest Leadership and Open Government Act (HLOGA) which amended the Lobbying Disclosure Act of 1995 to provide additional and more frequent disclosures of lobbying activities. Before the HLOGA went into effect on January 1, 2008, a lobbying report was required twice a year. However, since 2008, individuals and organizations that are involved in lobbying activities are required to submit a lobbying report in every quarter. In addition to providing more information about lobbying activities, the HLOGA of 2007 prohibited lobbyists from providing gifts or travel to members of Congress or its staffers.

We coded lobbying expenses by consulting the publicly accessible Web site of the Center for Responsive politics, *opensecrets.org*. If *opensecrets.org* did not have any information about the lobbying spending of an organization, we also consulted the data contained at *politicalmoney.org* (now CQMoneyLine).

For several reasons, we were able to find information about lobbying expenditures for less than two-thirds of the 2001 organizations and for 62 percent of the organizations listed in 2011. First,

compliance with the 1995 LDA is voluntary, and therefore those who are potentially covered make different judgment calls about the need to register. Because organizations that spend less than the specified amounts are not required to file reports, lobbying expense data omit the expenditures not only of relatively inactive organizations but also of small and impecunious ones. Moreover, many activities considered vital by organizations that seek political influence -- for example, grassroots lobbying, conducting policy-relevant research, or filing amicus briefs -- are not covered by the LDA. Finally, unless they establish a parallel, non-tax-deductible 501(c)4 arm, organizations that fall into the 501(c)3 designation under the tax code -- that is, non-profits for which contributions are tax-deductible -- are legally enjoined from undertaking significant lobbying, though not from engaging in many other kinds of political activity. (In terms of our categories, 501(c)3 organizations are concentrated among educational, health, social service, and arts or cultural institutions; public interest groups; identity groups; and groups advocating for the poor. In some of these categories, there is also likely to be a disproportionate share of organizations that are small and resource deprived.)

Gathering data about lobbying expenditures posed other problems. One involved how to code the lobbying expenditures of corporate subsidiaries. Another entailed how to enumerate the lobbying expenses of an organization that has lobbyists on staff and also hires outside firms to lobby. The question was whether the expenditures reported in the organization's filings include any spending by outside firms (which file separate reports). If so, the total for an organization is what is reported on the lobbying report submitted to Congress under the Lobbying Disclosure Act. If not, to reach a total, it is necessary to add up the figure reported by the organization and the figures on any filings by the firms hired. It turns out that the organization is supposed to include any lobbying expenditures by outside firms in the figure given in its lobbying reports, information that is not widely known even among people who assemble these data at opensecrets.org and politicalmoneyline.com. After considerable digging, the matter was resolved in a phone conversation with a Senate staffer. We undertook substantial efforts to check that our coders had coded correctly lobbying expenses reported by organizations with both lobbyists on staff and outside lobbyists. However, there is good reason to believe that the lobbying reports filed by organizations are not necessarily consistent with respect to this matter, and we have no way to correct any inconsistencies included in the reports filed.

2.4 Congressional Testimony

Using online and print sources, we coded all appearances by organizations at congressional hearings in which witnesses testified from the 107th Congress (1/4/01 to 11/14/02). This information was recorded from the front matter of the hearing text.

To determine the universe of hearings, we used the Congressional Information Service Abstracts. When possible, we gathered information about hearings from the Web sites of the relevant House and Senate Committees and Subcommittees or from the Government Printing Office Web site (GPO Access) in Lexis-Nexis, which provided access to the full-text versions of the hearings. For House and Senate committees for which hearings are not available online, we recorded the information from CIS Abstracts.

The witnesses were recorded from the table of contents, which usually contained the name and organizational/departamental affiliation of the witness. In recording the names of organizations, we did not necessarily use the names as given in the transcripts; rather, we used a version that corresponded to the organizations file.

Some witnesses provided both in-person testimony and written materials or prepared statements. In order to avoid double-counting the witness, only one type of testimony was recorded. All in-person testimonies and prepared statements are counted in the testimony variable. However, because information on other submitted materials was not available in the print copies of the CIS abstracts, the variable does not count data for about half the witnesses who submitted materials but did not appear in person or submit a prepared statement.

2.5 Amicus Briefs

One way that organizations seek to influence policy outcomes is by filing amicus briefs. Briefs of amicus curiae or “friend of the court” briefs are filed by people or groups who are not actual parties to a case (that is, who are neither the petitioner nor the respondent) but who feel as though they have an interest in the outcome or have important information to contribute. Using several sources of information, we coded all the briefs in cases with amicus activity in which petitions of certiorari were submitted to the Court during the 2000-01 and 2001-02 terms -- that is, between October 1, 2000 and September 30, 2002. (In such cases, the amicus activity may have occurred at a subsequent time, say in 2003. Our data include any amicus briefs associated with these cases even if the briefs were filed after September 30, 2002. Note also that we omitted amicus activity during the 2000-01 or 2001-02 terms in cases that had been filed before these dates.) As with congressional testimonies, we made efforts to match the amicus signers with organizations in the Washington Representatives database even when the versions of the names of organizations were not identical.

Again, as with congressional testimonies, many of the organizations that filed briefs during the specified period neither have a Washington office nor hire outside counsel to represent them. Therefore, many organizations that signed briefs were not listed in the 2001 *Washington Representatives* directory. We used several sources to assemble a complete set of cases for which amicus briefs were filed, compile all amicus briefs filed in those cases, and search for the required information: the searchable database of Supreme Court decisions at www.findlaw.com; the docket sheets at the Web site of the U.S. Supreme Court (<http://www.supremecourt.gov/docket/docket.aspx>); and the CIS *U.S. Supreme Court Records and Briefs* microfiche collection. Findlaw was the easiest to use, but it does not provide access to briefs in cases that did not get argued before the Court because cert was denied and is sometimes missing briefs from other cases. Therefore, we began by using the microfiche collection select all cases beginning with 00, 01, or 02 that had amicus activity. After discarding any cases that originated before 10/1/00 or after 9/30/02, we used the microforms to access and record the signers for all of the amicus briefs for all the cases where the petition for certiorari was filed between 10/1/00 and 9/30/02. With this set of cases and affiliated briefs, we were able to use docket sheets and briefs to record the specified information.

2.6 FEC PAC Contributions

Another form of organizational involvement in politics is making contributions through political action committees (PACs). We used data from several FEC files to code information about PAC giving for the 1999-2000 and 2001-2002 election cycles, about 500,000 transactions in all for each election cycle. These data were used to give summary figures of giving by PACs associated with organizations.

Many of the organizations that sponsor PACs do not have either offices in Washington or Washington-based counsel or consultants to represent them and, thus, are not included in the Washington Representatives database. Another is that care needed to be taken in matching the names of organizations listed in the FEC files with the names of organizations already included in the Washington Representatives database -- a sometimes daunting task because PACs sometimes have names that obscure such connections. An additional complexity is that the *Washington Representatives* directories list PACs that are located in Washington with the result that some organizations already had entries in the data base for both their organization and their PAC.

Coding PAC contributions presented a number of technical difficulties. Some organizations have more than one FEC ID, and some have more than one PAC, each with a different FEC ID. For example, corporations may have employee PACs, company PACs, and management PACs. Care was taken to link all these FEC IDs to the correct organization. An analogous issue arose with respect to the coding of state- and local-level PACs of federated organizations. If a subsidiary was already listed separately in the Washington Representatives database, it was linked to any PAC contributions it may have made. Under ordinary circumstances, however, PAC contributions from state- or local-level affiliates of federated organizations were attributed to the parent organization.

2.7 Grassroots Lobbying

One time-honored tactic of organizational political influence is grassroots lobbying: communicating with the public or with organization members and supporters in order to highlight issues, to shape opinion, or to generate communications to public officials in support of favored political positions. Because there is no obvious source of systematic information across organizations and issues about grassroots lobbying efforts, we were unable to assemble data about grassroots lobbying analogous to the data we present about other forms of organized interest activity and are forced to rely on a surrogate measure. As a substitute, we searched organizations' Web sites to see how organizations use the capacity of the Internet to communicate with interested individuals -- informing them of pending political issues and encouraging them to take action when appropriate.

In 2008, we investigated whether the organizations listed in the 2001 *Washington Representatives* directory were using their Web sites in any of several ways to inform and activate potential political supporters. We were able to find Web sites for 78 percent of the organizations listed in the 2001 directory (or 83 percent of the 2001 organizations not known to

be out of existence as of 2008). We were least successful (69 percent) in finding Web sites for previously listed foreign organizations and most successful (95 percent) when it came to the educational organizations listed in 2001. Because their Web sites are used extensively to inform the public about the issues currently under consideration, we excluded state and local governments from this analysis.

To capture Internet-based political mobilization, we recorded whether an organization's Web site discusses policy issues; whether it encourages individuals to take specific political action; whether it invites submission of an e-mail address in order to receive a newsletter or periodic updates about policy matters; whether it includes links to information facilitating voter registration; and whether it includes political information for members only.

2.8 Surrogate Advocacy: Evidence from Organizations' Web Sites

We were curious as to whether constituencies having limited representation in Washington gain enhanced clout when other, better-endowed organizations act as their surrogates. In order to get additional perspective on whether, out of self-interest or altruistic concern, organizations that represent particular constituencies also speak for other constituencies that are less noisy in organized interest politics, in 2006 we scrutinized the Web sites of organizations listed in the 2001 *Washington Representatives* directory for evidence of such surrogate advocacy. We noted references both to particular groups of people who are not especially well represented in politics – for example, children, women, or the poor – and to policies that have an impact on those groups, of which Head Start, mandated coverage of childbirth leave, and adjustments in eligibility for the Earned Income Tax Credit would be examples.

In our coding we focused on a strategically selected subset of categories of organizations and, because of the problems in knowing whom they represent, excluded altogether such institutions as corporations, universities, hospitals, and museums. We considered Web sites from the following categories of organizations: trade associations, professional associations, other occupational associations, unions, public interest groups, identity groups (that is, organizations representing racial, ethnic, religious, or LGBT groups, the elderly, or women), organizations representing children or youth, and social welfare organizations and organizations representing the poor. Because they are more numerous, trade associations (1/3) and professional associations (1/2) were sampled. For the other categories, all organizations were coded.

For each of these organizations, we coded whether its Web site contained advocacy *on behalf of* a series of groups, taken separately. That is, we coded separately whether an organization's Web site contained advocacy on behalf of Latinos, whether it contained advocacy on behalf of women, whether it contained advocacy on behalf of children, and so on. We recorded surrogate advocacy on behalf of the following:

- Minorities (or a laundry list of minority groups)
- African-Americans
- Latinos
- Asians

Native Americans
Christian groups or denominations (e.g., Christians, Methodists)
Non-Christian religious groups or denominations (e.g., Jews, Moslems)
Children or youth
Elderly
Women
Sexual orientation -- LGBT
Social welfare or poor
Immigrants
Working people
Middle class
Foreign policy concerns
Free enterprise or business

Our coding took into account whether any such mentions were displayed in a relatively prominent location – on the organization’s home page, in its mission statement, or on the “About Us” tab – or were buried more deeply in its Web site. Furthermore, we recorded whether references to a needy constituency encompassed all members of that group (which we consider “inclusive”) or referred just to the members of the needy constituency who share the characteristic that is core to the mission of the organization (which we deem “exclusive”). “Children,” “immigrants,” and “workers” are inclusive references. “Catholic children,” “Hispanic immigrants,” and “union workers” are exclusive references. An unqualified reference to support for Medicare was considered an inclusive reference to the elderly. If support of Medicare was linked to concern about the “Jewish elderly,” the reference was considered exclusive.

On occasion, advocacy on behalf of another group seemed to be self-interested. (Hypothetical examples would include a trade association of grocers advocating on behalf of the poor by lobbying for increased funding for food stamps or a professional association of dentists lobbying for Medicaid coverage of certain dental procedures.) When advocacy on behalf of another group could have been interpreted as self-interested, we recorded it as surrogate advocacy and did not treat it differently from other examples of surrogate advocacy.

Historical commitments no longer operative were *not* counted as surrogate advocacy. That is, if an organization had advocated on behalf of another group in the past but no longer did at the time of the coding, it was not recorded.

In addition, EEOC boilerplate to the effect that the organization is an equal opportunity employer and does not discriminate on the basis of race, gender, etc. was *not* considered to constitute a statement on behalf of Blacks or women.

We did record when a religious group advocated on behalf of other religious groups beside the one in question. Thus, a Catholic organization that referred to “Protestants” was counted as making a reference on behalf of another Christian denomination. A Catholic organization that

referred to “Moslems” or to “Buddhists” was counted as making a reference on behalf of a non-Christian denomination.

Our coding scheme also took account of direct services provided to and charitable giving on behalf of needy groups, including charitable giving by the foundation sponsored by a trade association or occupational association. Examples of direct services include pro-bono work (e.g., a legal aid or dental clinic) that uses professional or industry expertise to help others. However, we differentiated between such direct services and aid that seemed to have the purpose of bolstering the occupation or industry (e.g., scholarships in fields of study related to the profession or industry, after-school programs, curricula, of Web-site pages devoted to explaining and promoting the industry or profession).

3. Codebooks

Number of organizations in the data is 40,782. Dataset includes 87 variables. Note that the weighting system means some organizations are represented two or three times. If an organization was coded as belonging to two categories, it appears twice in this data set (once for each category it belongs to). **To estimate numbers from this dataset correctly, use the weights detailed below.**

Because the data were assembled piecemeal over a long period, the original naming of the variables was somewhat haphazard. For the release of the data, the variable names have been standardized. Therefore, anyone who wishes to use original data runs to replicate the results of earlier analyses should refer to Appendix C, which links the original variable names to the variable names in this file.

orgidno	Numeric identifier unique to each organization
orgname	Name of organization
category	Type of organization (See Appendix A for instructions on the coding.)
A. DON'T KNOW	101
B. BUSINESS	
1. Corporation	201

This category includes for-profit corporations including radio and television stations. Insurance companies in the health field present some ambiguities. If the company (for example, Aetna, Inc.) is simply a processor of paper -- collecting premiums, rationing health care, and paying benefits -- then it should be placed in this category. In contrast, if it actually delivers health care services then it is categorized as “other health.” For-profit health care management

systems that contract with hospitals, HMOs, and physicians and manage the health care of large numbers of subscribers are classified as both “health institutions” and as corporations.

Ex.: Tyson Foods, Inc.
Microsoft Corp.

2. American subsidiary of a foreign corporation 202

It will not always be possible to determine without further research whether a corporation is an American corporation, the American subsidiary of a foreign corporation, or a foreign corporation. If the corporation does not have its own office in Washington, but only hires Washington-based counsel, the directory will list the location of the corporate headquarters. Use this to determine whether it is domestic or foreign. If this does not help, use what you know or any clues to help determine the category into which it falls. Sometimes there is actually prose. Corporations with “N. A.” (North America) or “U.S.A.” attached to their names are generally subsidiaries of foreign corporations. If you suspect that a corporation is an American subsidiary of a foreign corporation, place it in this category and mark it as “uncertain.” We shall check later.

Ex.: Toyota Motor North America, USA, Inc.
ABB Daimler-Benz Transportation, N.A.

3. Cooperative 203

Ex.: Basin Electric Power Cooperative
Ocean Spray Cranberries

4. Trade association 204

The boundary between trade associations and other business associations is quite permeable. Both are membership associations in which the constituent members are firms. In general, trade associations bring together companies in the same industry on an ongoing basis to cooperate on multiple issues that confront the industry. The “other business” category includes peak business associations like the National Association of Manufacturers as well as ad hoc coalitions and single-issue groups that may join together firms from several industries.

Ex.: National Frozen Pizza Institute
The Fertilizer Institute

5. Business coalition, consortium, or other business association 205

Ex.: National Foreign Trade Council
TVA Watch
United States Council for International Business

6. Firm of professionals 206

This is another category with boundaries that are indistinct. There are a variety of firms that sell the services and expertise of partners or employees. At one end of a continuum are the organizations in this category, which includes firms of various kinds of professionals -- lawyers, engineers, architects, CPAs, and the like. At the other are firms -- a real estate agency, a catering company, a stock brokerage firm, or a collection agency -- whose employees (while they may, like barbers and realtors, be licensed) are not members of profession requiring a recognized educational course and credentialing process. Several kinds of firms that sell expertise -- in particular, investment counselors and managers, advertising and public relations agencies, and computer and Web site experts -- are on the border; we have determined, perhaps arbitrarily, they should be coded as corporations. When in doubt, consult the listing from the Statistical Abstract. Consulting firms that do research for clients (including governments) belong here. Non-profit think tanks that do not have clients are coded below.

Ex.: Skadden, Arps, Slate, Meagher, and Flom LLP
Stone and Webster Engineering Corp.

C. OCCUPATIONAL ASSOCIATIONS

The various categories of occupational associations in this section are all composed of individuals who share a common way of making a living. The overall rule is that, if it is the individual who joins, it is coded here. If the employer (a firm, a government agency, etc.) is the member, it is coded elsewhere.

The boundaries among occupational categories are quite permeable. When an occupation is at the boundary between two categories, the classification in the Statistical Abstract is the authority -- even when its categorizations might be open to question.

Occupational associations that bring together people who work in education, health, or agriculture (for example, American Academy of Nurse Practitioners) will be considered in the single category of occupational association and not in "other education," "other health," or "other farm."

1. Association of business professionals, managers, executives, and administrators 301

This category brings together a variety of professionals, managers, executives, and administrators who work in the for-profit sector. Among them are managers and executives in a particular industry. This category also includes business professionals who work for somebody else in the for-profit sector. If the occupation is one in which people set up shop for themselves or work in firms of similarly trained professionals, it is usually coded as a professional association (303) or as an other occupational association (304).

Managers and administrators in the non-for-profit sector -- for example, museums or universities -- are categorized elsewhere. While universities are very unlikely to be for-profit, the sector that specializes in the delivery of human services (hospitals, nursing homes, day care

centers) mixes for-profit and non-profit institutions. Because we cannot discern whether we are dealing with for-profit or not-for-profit institutions, we shall code administrators and managers in this sector as working in non-profits.

It may not be clear from the name of the organization whether it has individuals or firms as members and, thus, whether it is an occupational association or a trade association. The organization's Web site might (or might not) help.

Ex.: American Society of Pension Actuaries
Society of Consumer Affairs Professionals in Business
Cable Television Administration and Marketing Society

2. Association of public employees 302

Associations of non-union, civilian government employees are coded here. Public employee unions and associations of members of the military are coded below.

Ex.: National Federation of Federal Employees
National Association of Medicaid Directors

3. Professional association 303

It is not always easy to discriminate between professional associations and other occupational associations. In general, in order to be a professional association, the occupation in question must be one in which training requires a recognized educational course and at least a B.A. Nutritionists, social workers, and pharmacists are professionals. Nurses aides are not. When in doubt, consult the listing from the Statistical Abstract which, for example, lists athletes as professionals.

Unless they are unions, associations of health and educational professionals are coded here. Since they have individuals as members they should not be coded in "other health" or "other educational."

Ex.: American Society of Civil Engineers
American Speech, Language, and Hearing Association
American Academy of Family Physicians
National Association of Biology Teachers

4. Other occupational association 304

Ex.: National Ass'n of Executive Secretaries and Administrative Assistants
National Ass'n of Realtors
National Ass'n of Health Underwriters

5. Association of administrators and managers of nonprofits 305
Ex.: Association of Physical Plant Administrators of Universities and Colleges
National Association of College and University Business Officers
Foundation of the American College of Nursing Home Administrators

6. Association of public employees – military 306

Associations of members of the armed services and National Guard -- even those like physicians and lawyers in the military -- are coded here. Veterans' organizations and associations of reservists are coded elsewhere.

- Ex.: National Military Intelligence Assn.
Non-Commissioned Officers Assn of the U.S.A.
Pennsylvania National Guard Assn.
Association of Military Surgeons of the U.S.

D. UNION

Certain unions bring together members of occupations that would be considered professions (e.g., teaching) as defined above or that are quite well paid (e.g., the Air Line Pilots Association). For our purposes, what distinguishes a union is that it bargains collectively with employers on behalf of its members.

In a manner analogous to occupational associations, unions that bring together people who work in education or health (for example, National Education Association) will be considered in the single category of union and not in "other education" or "other health."

1. Blue collar -- Public employees 401
Ex.: National Ass'n of Letter Carriers of the USA
International Ass'n of Fire Fighters
2. White collar -- Public employees 402
Ex.: American Federation of Teachers
National Air Traffic Controllers Association
3. Blue collar -- Private sector 403
Ex.: Int'l Brotherhood of Electrical Workers
United Mine Workers

- | | | |
|----|--|-----|
| 4. | White collar -- Private sector | 404 |
| | Ex.: Ass'n of Flight Attendants
Retail, Wholesale, and Department Store Workers Union | |
| 5. | Public sector union - mixed blue- and white-collar | 405 |
| | Ex.: American Federation of Government Employees
American Postal Workers Union | |
| 6. | Private sector union - mixed blue- and white-collar | 406 |
| | Ex.: United Electrical, Radio, and Machine Workers | |
| 7. | Peak union, union consortium, assn of union executives, or other labor | 407 |
| | Ex.: AFL-CIO Maritime Trades Department
National Federation of Independent Unions | |

E. FARM

- | | | |
|----|--|-----|
| 1. | Farm -- Commodity specific | 501 |
| | Agricultural organizations that are commodity-specific often include interested parties (for example, processors or farm equipment manufacturers) in addition to producers. Even so, consider them commodity-specific farm organizations. Agricultural cooperatives are coded as cooperatives (203). Other industries that involve the harvesting of living things (e.g., fishing or lumbering) are also coded here. | |
| | Ex.: National Pork Producers Association
National Potato Council | |
| 2. | Other farm | 502 |
| | Ex.: American Farm Bureau Federation
Agribusiness Council | |

F. EDUCATION

1. Students 601

Ex.: United States Students Association

2. Educational institution -- Public 602

Local school districts, and their boards of education, are not categorized here. They are considered local governments (802).

Ex.: University of California at Riverside
Alabama A & M University

3. Educational institution -- Private 603

Religiously affiliated or single-sex institutions are coded here as educational institutions and are not given a second categorization that would specify its identity group affiliation.

Ex.: University of Notre Dame
Boston College

4. Educational institution -- For-profit 604

Ex: DeVry, Inc.

5. Educational institution -- DK whether public or private 605

Ex.: Philadelphia University
New Jersey Institute of Technology

6. Other educational 606

Ex.: National Foundation for the Improvement of Education
National Association of Independent Colleges and Universities

G. HEALTH

1. Health institution 701

This category includes a variety of health care delivery institutions including not only hospitals but also nursing homes and rehabilitation centers. Medical schools should be classified as both educational and health institutions. For-profit health care management systems that contract with hospitals, HMOs, and physicians and manage the health care of large numbers of subscribers are classified as both health institutions and as corporations.

Ex.:	Partners Healthcare System, Inc. Joslin Diabetes Center St. Mary's Hospital Blood Center of Southeastern Wisconsin	
2.	Other health	702
Ex.:	National Assn of Public Hospitals and Health Systems Academic Health Center Coalition	

H. U.S. GOVERNMENT

1.	State	801
Ex.:	Florida, Washington Office of the State of Association of California Water Agencies	
2.	Local or county (including departments and authorities)	802
Ex.:	St.Louis/Lake Counties Regional Rail Authority Denton, Texas, City of Riverside Unified School District	
3.	Government corporation or public/private partnership	803

This category includes a variety of kinds of government corporations and public/private partnerships. There are a number of councils and alliances that bring together representatives of government, industry, universities, and so on to discuss, conduct research, and advocate with respect to particular public policy problems. Among the common topics are regional economic development, transportation, and environmental preservation. When the subject is education, this kind of council is coded as Other Educational (606). When the subject is health this kind of council is coded as Other Health (702). Community development corporations are also coded here.

Ex.:	Minnesota Transportation Alliance Corporation for Public Broadcasting	
4.	Consortium of governments	804
Ex.:	National Association of Flood and Stormwater Mgmt. Agencies National League of Cities	
5.	Airport	805
Ex.:	Akron-Canton Airport	

Denver Airport

6. Other government 806

J. FOREIGN

1. Government (including embassies, ministries, and agencies) 1001

Ex.: Azerbaijan, Embassy of the Republic of
Gibraltar Information Bureau

2. Corporation 1002

Ex.: AeroRepublica, SA
Ajinomoto Co., Inc.

3. Business association or consortium 1003

This category also includes federations of agricultural exporters and federations of industries in more than one country.

Ex.: Association of Foreign Investors in US Real Estate
Ass'n of Chocolate, Biscuit, and Confectionery Industries of EEC

4. Trans-national public-private partnership 1004

Ex.: INTELSAT

5. Other foreign 1005

This catchall category includes, among other things, foreign NGOs and political parties in other countries. International NGOs that engage in relief efforts abroad or provide development assistance abroad are also coded here. (To determine whether such an organization is American or international, check where its offices are located and who is on the board.)

Ex.: Lao Progressive Institute
Luso American Foundation

6. International organization 1006

This category includes international organizations and alliances (and their agencies) in which national governments are members.

Ex.: The Group of 20
World Health Organization

K. PUBLIC INTEREST

These are advocacy organizations that seek public goods. Whether a policy objective is a public good is a complicated business and usually depends upon the nature of the membership. In the first example below, an organization that seeks better rail transportation is a public interest organization if its members are rail passengers, but not if its members are engineers or railroad executives. If the members or supporters of an organization are in a position to benefit selectively from the realization of its policy goals, then it is not a public interest organization.

1. Consumer 1101

Ex.: National Ass'n of Rail Passengers
American Consumers for Affordable Homes

2. Environmental 1102

Whether they are polluters seeking relief from federal regulation or manufacturers of environmentally friendly home cleaning products, corporations often seek to wrap themselves in the mantle of environmentalism. However, they are not public interest groups. This section contains public interest organizations only. Thus, organizations listed here must be composed of members having no selective interest in environmental policy.

Ex.: Friends of the Earth
National Resources Defense Fund

3. Wildlife and animals 1103

This category includes several kinds of organizations that are concerned about the well-being of animals -- not only wildlife but also laboratory animals, pets, and farm animals.

Ex.: Ducks Unlimited
International Fund for Animal Welfare

4. Single political Issue -- Domestic: liberal 1104

Ex.: National Prison Project
National Abortion and Reproductive Rights Action League

5. Single political Issue -- Domestic: conservative 1105

Ex.: Accuracy in Academia
National Right to Work Committee

6. Single political Issue -- Other domestic 1106

If it is not clear where the position espoused by a single-issue public interest organization falls on a left-right continuum, list it here and we can check again later.

Ex.: National Whistleblower Center
National Fire Protection Ass'n

7. Multi-issue -- liberal 1108

Ex.: Americans for Democratic Action

8. Multi-issue -- conservative 1109

Ex.: American Conservative Union
Landmark Legal Foundation for Civil Rights

9. Civil liberties 1110

Ex.: American Civil Liberties Union
Free Speech Coalition

10. Citizenship empowerment, participatory (including voter education) 1111

Organizations that focus on classroom teaching about government for the young are categorized as other educational (606). Organizations that focus on the textbook civic education of adults or the hands-on political learning for either adults or the young are coded here.

Ex.: Close Up Foundation
Committee for Citizen Awareness

11. Government reform 1112

Organizations concerned about governmental reform (for example, campaign finance reform, term limits, elimination of government waste and corruption) are coded here. Organizations concerned about reform of policy (for example, trade, tax, or environmental policy) are coded elsewhere.

Ex.: OMB Watch
Common Cause

12. Political Issue -- International: liberal 1113

There are three categories of organizations that focus on country-specific issues or on international relations more generally. When the emphasis is on peace and disarmament or on human rights, they are coded here.

Ex.: Human Rights Watch
Fund for Peace

13. Political Issue -- International: conservative 1114

Organizations are coded here when the emphasis, in contrast, is on national security and defensive strength.

Ex.: American Security Council
Free the Eagle

14. Political Issue -- International: other 1115

Most organizations that focus on international matters do not have an obvious liberal or conservative tilt. American organizations that engage in relief efforts abroad or provide development assistance abroad are coded here as are most organizations that focus on political conflicts in a particular locale abroad. Some of the latter organize a diaspora group concerned about the homeland -- in which case they are also coded as an ethnic or nationality group.

15. School Choice 1116

Whether subsidized by parent members, outside benefactors, or conservative foundations, organizations that promote school choice -- including vouchers and charter schools -- are coded here. Such organizations may also give scholarships to help needy children attend schools other than their local public schools.

L. ELECTORAL AND PARTISAN

1. PAC or candidate organization 1201

The PAC's listed here are essentially electoral organizations which, while they may be ideological or affiliated with a particular politician are not simply the political giving arm of an organization that could be classified elsewhere. PAC's should ordinarily be classified in the same category as the organization or institution with which they are affiliated.

Ex.: Straight Talk America
National Committee for an Effective Congress

2. Party or partisan organization 1202

Ex.: National Republican Senatorial Committee
Democratic Governors Assn.

M. VETERANS

1. Veterans' associations 1301

Ex.: American Legion
Vietnam Veterans of America

2. Members of the reserves 1302

Ex.: Senior Army Reserve Commanders Assn.
Marine Corps Reserve Officers Assn.

N. CIVIL RIGHTS, RACIAL, RELIGIOUS AND NATIONALITY GROUPS

1. "Minorities" 1401

Organizations (for example, the Minority Business Enterprise Legal Defense and Education Fund) that refer to "minorities" rather than to members of a particular racial or ethnic group are coded here. Many of these organizations fit into more than one category.

2. African-Americans 1402

Ex.: National Association for the Advancement of Colored People
National Urban League

3. Latinos 1403

Included in this category are organizations that bring together various Hispanic or Latino groups as well as those that are specific to one nationality group (for example, Mexican Americans, Puerto Ricans, or Cubans).

Ex.: National Puerto Rican Coalition
Mexican-American Legal Defense and Educational Fund
National Alliance for Hispanic Health

4. Asians 1404

Ex.: Japanese American Citizens League
Organization of Chinese Americans

5. Native Americans 1405

Ex.: Tunica Biloxi Indians of Louisiana
Blackfeet Tribe of Montana

6. European ethnic groups 1406

- Ex: National Federation of Croatian Americans
United Hellenic American Congress
7. Jewish 1407
- Ex.: American Jewish Committee
B'nai B'rith International
8. Islamic or Arab groups 1408
- Ex.: American-Arab Anti-Discrimination Committee
Arab American Institute
9. Other nationality groups 1409
10. "Christian" 1410
- Ex.: Traditional Values Coalition
Christian Coalition
11. Protestant -- Mainline 1411

There is dispute as to exactly how to differentiate mainline from evangelical Protestants. Our rule of thumb is to consider as mainline all Protestant denominations in the National Council of Churches. By this definition, all Methodist, Lutheran (including Missouri Synod), Presbyterian, Episcopalian, Congregationalist (United Church of Christ), and Quaker organizations are categorized as mainline Protestant as are the American Baptist Association, the American Baptist Church, the National Baptist Convention of America, and the National Baptist Convention, U.S.A. Other Baptists including the nation's largest Protestant denomination, the Southern Baptist Convention, are considered to be evangelical Protestants as are those who named a variety of evangelical and pentecostal groups -- for example, the Assemblies of God, Church of Christ, Church of the Nazarene, and the Pentecostal Church. If in doubt, place in one of the "DK" or "other" categories.

- Ex.: Progressive National Baptist Convention
United Church of Christ Justice and Witness Ministry
12. Protestant -- Evangelical 1412

The National Association of Evangelicals and its constituent denominations are coded here as well as the Baptist, evangelical, and pentecostal denominations discussed above.

13. Protestant -- Other or DK what kind 1413

- Ex.: Church of the Brethren Washington Office
14. Catholic 1414
- Ex.: U.S. Catholic Conference
15. Other Christian 1415
- Ex.: Church of Jesus Christ of Latter Day Saints
16. Other religion 1416
17. Interfaith 1417
- Ex.: National Conference of Christians and Jews

O. AGE

1. Children or youth 1501

This category includes not only advocates for children but youth organizations. Medical organizations focusing on pediatric issues or diseases specific to the young (for example, the Juvenile Diabetes Foundation or the Shriners Hospital for Children) should be categorized as health organizations and should not be listed here.

Ex.: National 4-H Council
Children's Defense Fund

2. Elderly 1502

Ex.: United Seniors Ass'n
TREA Senior Citizens League

P. GENDER-SPECIFIC

This category brings into relief a difficulty that runs through many of the categories in this classificatory scheme: Are we interested in the membership or in the goals of an organization? When it comes to gender classifications, we shall code here any organization that focuses on advocacy for men's or, more often, women's distinctive experiences, needs, and problems. Examples of men's organizations that do so are the Promises Keepers, which is not listed in the directory, and advocates for the rights of divorced fathers.

Many organizations (for example, the Disabled American Veterans or the American Dental Hygienists' Association) that do not focus on such gender-specific advocacy are essentially single sex in their membership. However, unless the organization self-consciously

excludes members of one sex, it should not be coded here. (The Knights of Columbus, which is not in the directory, excludes women; Hadassah, which is, excludes men. The Lutheran Brotherhood, the Sons of Italy, and the B'nai B'rith may once have excluded women but do not now.)

- | | | |
|----|-------|------|
| 1. | Men | 1601 |
| 2. | Women | 1602 |

Ex.: National Women's Political Caucus
Feminist Majority

Q. SEXUAL ORIENTATION -- LGBT	1701
-------------------------------	------

LGBT organizations and other organizations concerned with sexual orientation or freedom are coded here.

Ex.: National Gay and Lesbian Task Force
Human Rights Campaign Fund

R. DISABLED AND HEALTH ADVOCACY

- | | | |
|----|---|------|
| 1. | Disabled | 1801 |
| | Ex.: National Rehabilitation Information Center
Christopher Reeve Paralysis Foundation | |
| 2. | Advocacy and research for particular illness or disability | 1802 |

Ex.: National Psoriasis Foundation
Parkinson's Disease Foundation
National Association for the Deaf
National Federation for the Blind

S. SOCIAL WELFARE/POOR

- | | | |
|----|------------------------|------|
| 1. | Social welfare or poor | 1901 |
|----|------------------------|------|

These organizations advocate on behalf of the poor in the United States or in favor of more comprehensive guarantees with respect to basic human needs in American politics. They may also attempt to organize the poor. Many organizations not only engage in advocacy but also provide direct services. In placing an organization into one of the two categories (1901 or 1903), consider the overall balance in organizational activities.

Ex.: National Alliance to End Homelessness
Food Research and Action Center
ACORN

2. Benefits recipients (welfare, food stamps, unemployed, housing) 1902

Included in this category are any organizations, if there are any, that bring together recipients of social welfare benefits (jobless workers, public housing residents, and the like) advocating on their own behalf. The now-defunct National Welfare Rights Organization would have fallen into this category.

3. Service providers (including disaster relief) 1903

These organizations provide direct services to those in need in the United States. Included here as well are organizations that bring together such agencies (in essence, trade associations of non-profits that deliver direct services to the economically needy) and provide technical assistance, organizational support, or opportunities for mutual consultation.

Ex.: Indianapolis Neighborhood Housing Partnership
Goodwill Industries
Metropolitan Family Services

T. RECREATIONAL 2001

Organizations that bring together people who enjoy a particular activity or form of recreation belong here. However, if all or most the members make a living by providing opportunities to enjoy the activity or by teaching the activity, the organization should be coded elsewhere.

Ex.: American Kennel Club
International Traditional Karate Federation

U. ARTS/CULTURAL 2101

This category includes not-for profit zoos, museums of all kinds, and public radio and television stations as well as arts and cultural institutions and associations.

Ex.: New England Aquarium
American Association of Museums
American Arts Alliance

V. CHARITY/PHILANTHROPY 2201

This category brings together several kinds of organizations. Among them are foundations and other charitable consortia (for example, the United Jewish Communities, which

is the successor to the Combined Jewish Appeal) that make grants or contributions to direct-service providers. In addition, organizations that seek to encourage volunteering or philanthropy, that study philanthropy, or that advocate on behalf of philanthropy before the government are coded here. Service providers are coded elsewhere (1903). By the way, although it would seem to be the Catholic analogy to the United Jewish Communities, Catholic Charities is coded as a 1903 (as well, of course, as a 1414) because it is a provider of direct services.

Ex.: Points of Light Foundation
Ford Foundation
The Philanthropy Roundtable
Council on Foundations

W. THINK TANKS AND OTHER NON-PROFIT POLICY RESEARCH

1. Think tank -- liberal 2301

Ex.: Progressive Policy Institute
Urban Institute

2. Think tank -- conservative 2302

Ex.: Cato Institute
National Center for Public Policy Research

3. Business-affiliated research 2303

Companies and trade and other business associations frequently set up non-profit research entities. Business-sponsored non-profit research enterprises and think tanks belong in this category.

Ex.: American Cocoa Research Institute
Insurance Information Institute

4. Other non-profit research 2304

Ex.: Institute for Alternative Futures
Urban Land Institute

X. OTHER 2401

Sometimes, it is clear what an organization is, but the available categories do not accommodate it easily. Organizations with hybrid clienteles or goals are especially likely to be difficult to categorize. Organizations that just do not fit anywhere belong in this category. In coding PACs, third parties (Green Party, Reform Party, Libertarian) are categorized here.

Ex.: National Geographic Society
Aircraft Owners and Pilots Assn.

weight
file by: Numeric weight that weighs each organization's appearance in the data

	8	Organization no longer exists
	9	Cannot find website
	10	NA (not in 2001 directory) Set as missing value.
web_policydum	Does website mention policy issues?	
	0	No – not found on website
	1	Yes – found on website
	(All other values coded as NA)	
web_calldum	Does website include a call for action?	
	0	No – not found on website
	1	Yes – found on website
	(All other values coded as NA)	
web_emaildum	Does website include a way to sign up for email updates?	
	0	No – not found on website
	1	Yes – found on website
	(All other values coded as NA)	
web_votereg dum	Does website include voter registration information?	
	0	No – not found on website
	1	Yes – found on website
	(All other values coded as NA)	
web_membinfodum	Does website include political information for members only?	
	0	No – not found on website
	1	Yes – found on website
	(All other values coded as NA)	
web_mobilize	Does website include any of these mobilization efforts?	
	0	No
	1	Yes
web_facilitate	Does website facilitate individual political action (by including a call for action, a way to sign up for email updates, or information on voter registration)?	
	0	No
	1	Yes

MENTIONS OF OTHER GROUPS

This coding includes organizations in the following categories:

Trade associations (do 1/3)	204
Professional associations (do 1/2)	303
Other occupational associations	304
Unions	401-407
Public interest groups	1101-1116
“Minorities”	1401
African Americans	1402
Latinos	1403
Asians	1404
Native Americans	1405
European ethnic groups	1406
Jewish	1407
Islamic or Arab groups	1408
“Christian”	1410
Protestant - Mainline	1411
Protestant - Evangelical	1412
Catholic	1414
Other Christian	1415
Other religion	1416
Interfaith	1417
Children or Youth	1501
Elderly	1502
Women	1602
Sexual orientation -- LGBT	1701
Social welfare or poor	1901
Social service providers	1903

The following variables all have the same value labels, measuring whether each group was mentioned on the website of an organization in any specific way:

minorities
africanamericans
latinos
asians
nativeamericans
christiangroupsordenominations
nonchristiangroupsordenomination
childrenoryouth
elderly
women
sexualorientationglbt
socialwelfareorpoor
immigrants

workingpeople
middleclass
foreignpolicy
freeenterpriseorbusiness

For each group, we code whether the organization's website mentions them:

- 0 Already categorized as main objective
- 1 No mention
- 2 Oblique reference to advocacy only
- 3 Exclusive reference to advocacy NOT on home page, mission statement, or "about us" link
- 4 Exclusive reference to advocacy on home page, mission statement, or "about us" link
- 5 Inclusive reference to advocacy NOT on home page, mission statement, or "about us" link
- 6 Inclusive reference to advocacy on home page, mission statement, or "about us" link
- 8 Web site -- No information on mission, goals, or activities
- 9 No Web site
- 10 Exclusive reference to direct services
- 13 Inclusive reference to direct services
- 14 Exclusive reference to services promoting organizational mission
- 15 Inclusive reference to services promoting organizational mission
- 16 Exclusive reference to charitable contributions
- 17 Inclusive reference to charitable contributions
- 19 Organization no longer in existence
- 99 Double listing (including mergers)

appendcat Full list of all categories, ordered by grouping.

Appendix A: Instructions for Coding Organizations

Coding the organizations in the Washington Representatives directory poses several difficulties. These guidelines are designed to help with the thousands of discretionary decisions that have to be made.

Code each organization with a three-digit code.

If neither the name of the organization nor any attached information makes clear what it is, you can usually find out enough to make a reasonable categorization by looking on the Web. (Use Google -- entering the organization name in quotation marks -- to find the Web site. The necessary information can usually be located on the home page or under "About Us" or "FAQ's.") If you cannot find any information on the Web (or if it is not clear which of many organizations with the same name -- for example, the "Clean Water Coalition" -- is being referenced), place it in the "Don't Know" category for further research. After you have finished coding all the organizations in your batch, you can return to these organizations later and use print sources to research them. If necessary, we can phone them.

If you think you have the right category (or categories) for an organization, but are not really sure, place a "U" in the "Uncertainty" column and we can discuss it, or do more research, later.

The boundaries between various categories specified below are sometimes indistinct. There are suggestions below about how to distinguish between particular sets of categories. Sometimes you will need additional information (for example, whether it is an individual employee or the firm that joins an organization) in order to choose between adjacent categories. You can usually find the relevant information on the organization's Web site.

This scheme permits the coding of organizations into as many as three categories. It is not always clear whether an organization belongs in a single or more than one category. You may be required to make a subjective judgment as to whether one aspect of an organization clearly outweighs the others or whether they are more or less equal. For example, professional associations like the American Political Science Association (APSA), the learned society for political scientists, often make provision for institutional memberships. Both the Harvard Government Department and the Boston College Department of Political Science are institutional members of the APSA. Nonetheless, the APSA's membership and activities are clearly weighted in the direction of individual political scientists and assistance to institutional members is a very secondary part of what the APSA does. Hence, the APSA would be placed in the single category of professional association (303). Perhaps the most frequent kind of organization that requires placement in more than one category is an organization that joins a common occupation or policy goal with some kind of shared identity (race, religion, gender, etc.). Examples include the National Medical Association (African-American physicians), Mothers against Drunk Driving, or the American Indian Higher Education Consortium.

Additional Suggestions for Coding Organizations

1. Check the entry in the Washington Representatives directory, which may give the information needed to code the organization. If not, it may indicate a Web site or, for later use, a phone number.
2. Using a search engine like Google, find any information about the organization on the Web. If the organization has a Web site, the necessary information can usually be located on the home page or under "About Us" or "FAQ's." If there are ambiguities, see what can be learned from the information about membership categories, lists of members, or the names and institutional affiliations of board or staff members. If there is no Web site, you may be able to learn about the organization from other materials on the Web.
3. Consult Associations Unlimited online or the Encyclopedia of Associations in hard copy.
4. Check the electronic archives (for appropriate dates) of publications like CQ, the National Journal, the New York Times, the Washington Post, and the Wall Street Journal. Do a search on Lexis-Nexis. Check the Supreme Court briefs in Lexis.
5. Check any other relevant Web sites -- for example, the FEC PACronyms file; guidestar.org, which lists nonprofits; or influence.biz.
6. If the directory lists a location, use infousa.com to search for the organization.
7. Check the hard copies of the Almanacs of Federal PACs, which can be found at the Kennedy School.
8. If there is a phone number, use a search engine to search on the phone number. Use infousa.com to do a backwards lookup to see whether the organization can be located. Call the organization.
9. For organizations in the 1981 or 1991 directory, consult bound copies of the Encyclopedia of Associations for 1980-1982 or 1990-1992.
10. Make a list of the cases where there are two or three entities with the same name. We can call Valerie Sheridan at Columbia Books and ask her which one was referenced in the listing.
11. If no other information is available and the organization is listed in the 1981 directory, use 1981 code from the archives from Organized Interests project. If no categorization was made then (DK), classify as 101 (Don't Know) and give up.
12. If no information is available and the organization is not listed in the 1981 directory, classify as 101 (Don't Know) and give up.

Appendix B: Coding Organizational Membership Status

For each organization in the data base, we have coded its status as an institution or one of several kinds of membership groups. For many categories of organizations -- for example, corporations (201), trade associations (204), or professional associations (303) - the definition of the organizational category includes consideration of membership status. For the others, membership status was coded by hand.

We classified the organizational membership status as follows:

1. Institution
2. Association of individuals
3. Association of institutions
4. Government or association of governments
5. Mixed
6. Other
9. Can't tell/Don't know

The organizational membership status for the following was defined by the category into which the organization had been placed:

1. Institution (201, 202, 206, 602-605, 701, 1002, 2301-2304)
2. Association of individuals (203, 301-306, 401-406, 1301-1302)
3. Association of institutions (204-205, 1003)
4. Government or association of governments (801-802, 804-806, 1001, 1006)
5. Mixed (803)
6. Other (1201-1202)
7. Don't know (101)

The organizational membership status of these categories was coded by hand: 407, 501-502, 601, 606, 702, 1004, 1005, 1101-1116, 1401-1417, 1501-1502, 1601-1602, 1701, 1801-1802, 1901-1903, 2001, 2101, 2201, 2401.

Appendix C: Variable Names Used in Previous Analyses

Because the data were assembled piecemeal over a long period, the original naming of the variables was somewhat haphazard. In data now being released, the variable names have been standardized across the five years for which we collected evidence. The table below shows the current name of each variable in the dataset, with the previous name (if different). Anyone who wishes to use original data runs to replicate the results of earlier analyses should, first, change the variables to match their previous name.

ICPSR 35309

Washington Representatives Study (Organized Interests in Washington Politics) - 1981, 1991, 2001, 2006, 2011

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.

ICPSR has an FAQ on [copyright and survey instruments](#).

CASEID: SEQUENTIAL RECORD IDENTIFIER

Based upon 43,012 valid cases out of 43,012 total cases.

Location: 1-5 (width: 5; decimal: 0)

Variable Type: numeric

ORGIDNO: Numeric identifier unique to each organization

Numeric identifier unique to each organization
